

WA Surface treatment

WA表面処理はヤマグチマイカ独自の表面処理。アモジメチコンで無機系体質顔料に表面処理する事で、他には無い独特の使用感が得られます。また、球状シリカを処理する事でマイクロプラスチックビーズの代替品としても活用が可能。

Amodimethicone treatment, which jointly patented with KOSE, available for any inorganic pigments, provides excellent skin affinity, hydrophobicity and pressability. Porous silica beads with Amodimethicone can be replacement with microplastic beads.

FEATURES

特徴

Skin affinity

肌なじみ

Spreadability

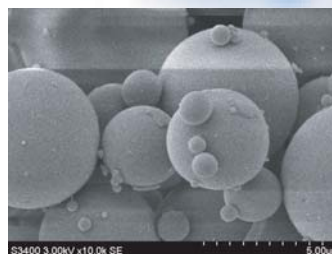

延展性

Hydrophobisity

撥水性

Pressability

成型性

Trade Name	Particle size (μm)	Whiteness	Loss on drying (%)	Oil absorption (ml/100g)	Hydrophobicity (Contact angle)
